

astronomy

Ukrainian · 2024-09-01 – 2026-08-31 · wikipedia · fetched 2026-09-27

Conclusion

Interest in astronomy on Ukrainian Wikipedia is falling: its share of the edition's views changed -45% year over year (90% CI -50...-33%), a larger fall than the whole edition's -25%. The robustness check holds; trust is medium because a known Wikimedia data problem overlaps the compared years. Interest is strongly seasonal, with peaks in Sep and Dec.

Recommendation

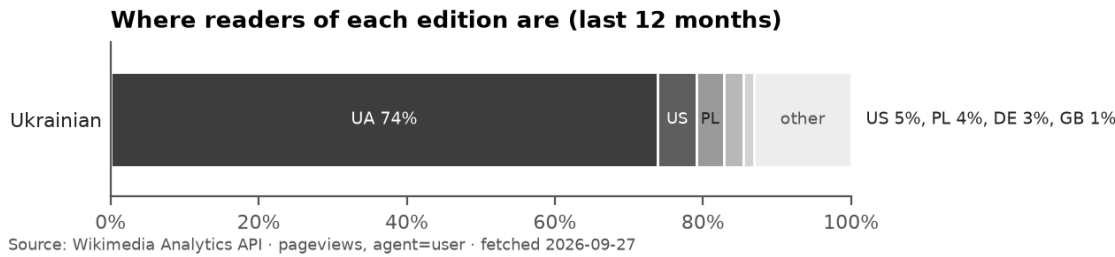

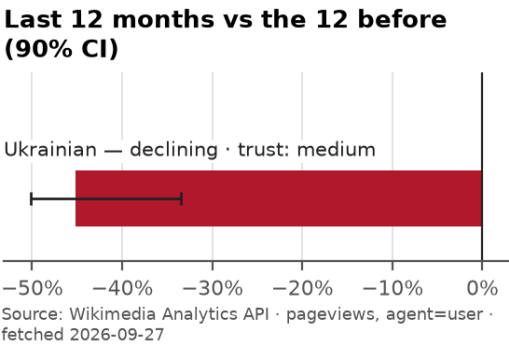

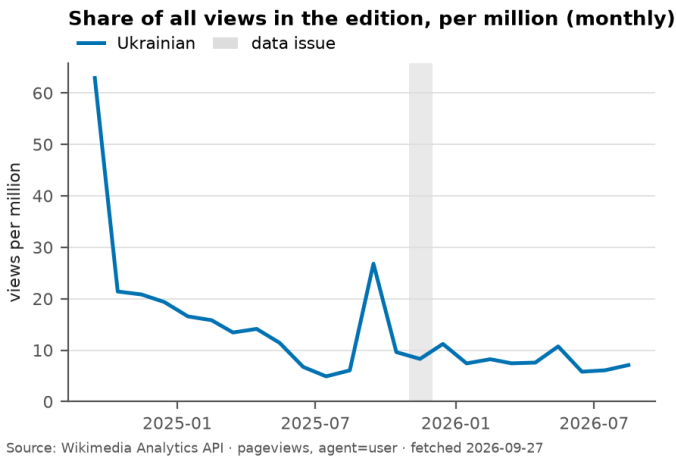

Treat an astronomy course for Ukrainian speakers as a bet against a falling trend, not a growing one. If you test it, time the launch for September, when interest peaks.

What to check next

Pageviews show curiosity, not willingness to pay: test demand with a landing page before building the course.

Languages at a glance

Language	Views/mIn	12-month change (90% CI)	Verdict	Trust	Seasonality	Top countries	Article
Ukrainian	9.69	-45% (-50...-33%)	declining	medium	strong	UA 74%, US 5%, PL 4%	regular article

Why this trust level

Ukrainian: a known Wikimedia data problem overlaps the compared years

Assumptions and limitations

- Pageviews show curiosity, not willingness to pay: treat the results as leads for further validation.
- A language edition is not a country: its readers live in several countries, and one country reads several editions.
- 2025-11-01...2025-11-30: Undetected bots inflated 'human' pageviews, most strongly in smaller languages; this month was never corrected.
- 2025-03-20...2025-08-31: Undetected bot traffic in this period was removed retroactively in Oct 2025 (history was rewritten).
- 2025-05-11...2025-07-23: About 2% of pageviews from Europe and Asia were lost.
- 2025-12-01...2026-03-31: Bot traffic in this period was removed retroactively in May 2026 (history was rewritten).
- Country figures are Wikimedia's rounded upper bounds.

Sources and method

Metric: share of all views of the language edition (per million). Change: last 52 weeks vs the 52 weeks before, 90% block-bootstrap interval. Trend: Theil-Sen with a Mann-Kendall test. Spikes: Hampel filter. Human traffic only. Requests: agent=user, access=all-access; Pageviews API (per-article, aggregate, top-by-country), daily country-page dataset, Wikidata API. 1 article(s) and 0 redirect(s) counted. Data: Wikimedia Analytics API and Wikidata (CC0), fetched 2026-09-27. Full version: report.md. Wikidata: Q333.
