

Liam Payne

English, Polish · 2024-09-01 – 2026-08-31 · wikipedia · fetched 2026-09-27

Conclusion

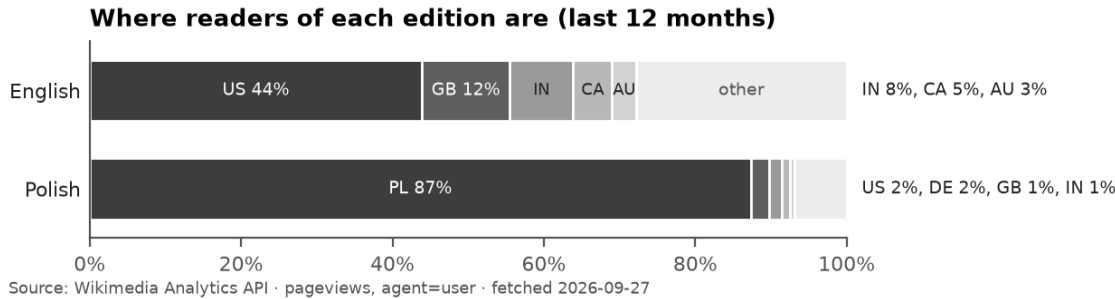

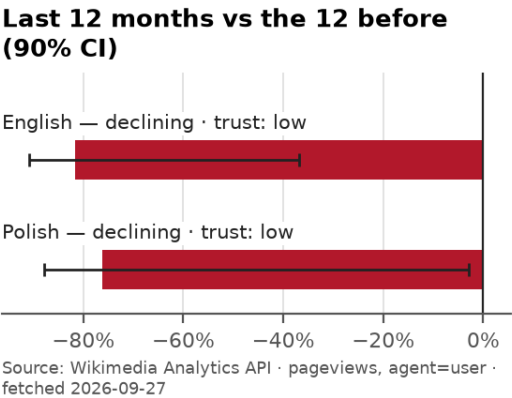

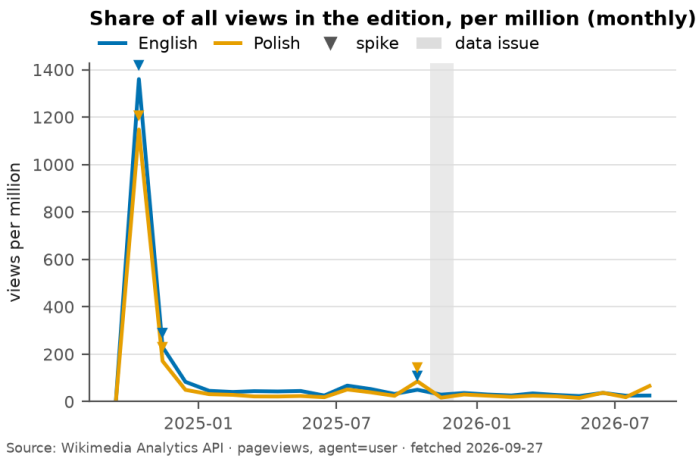

Views of the Liam Payne article are dominated by the news spike on 2024-10-17: the share changed -82% in English and -76% in Polish year over year, but both verdicts rest on that spike. Trust is low in both editions; in Polish the robustness check reverses the verdict. No audience can be recommended yet.

Recommendation

Do not read the fall as lost interest: it is the fading of a one-off news event. Re-run the analysis once both compared years lie after the spike.

Languages at a glance

Language	Views/mIn	12-month change (90% CI)	Verdict	Trust	Seasonality	Top countries	Article
English	31.4	-82% (-91...-37%)	declining	low	weak	US 44%, GB 12%, IN 8%	regular article
Polish	32.1	-76% (-88...-3%)	declining	low	weak	PL 87%, US 2%, DE 2%	regular article

Why this trust level

English: a fifth to a half of views come from spikes; the verdict weakens under alternative calculations; a known Wikimedia data problem overlaps the compared years

Polish: most views come from one-off spikes; the robustness check reverses the verdict; a known Wikimedia data problem overlaps the compared years

Assumptions and limitations

- Pageviews show curiosity, not willingness to pay: treat the results as leads for further validation.
- A language edition is not a country: its readers live in several countries, and one country reads several editions.
- 2025-11-01...2025-11-30: Undetected bots inflated 'human' pageviews, most strongly in smaller languages; this month was never corrected.
- 2025-03-20...2025-08-31: Undetected bot traffic in this period was removed retroactively in Oct 2025 (history was rewritten).
- 2025-05-11...2025-07-23: About 2% of pageviews from Europe and Asia were lost.
- 2025-12-01...2026-03-31: Bot traffic in this period was removed retroactively in May 2026 (history was rewritten).
- Country figures are Wikimedia's rounded upper bounds.

Sources and method

Metric: share of all views of the language edition (per million). Change: last 52 weeks vs the 52 weeks before, 90% block-bootstrap interval. Trend: Theil-Sen with a Mann-Kendall test. Spikes: Hampel filter. Human traffic only. Requests: agent=user, access=all-access; Pageviews API (per-article, aggregate, top-by-country), daily country-page dataset, Wikidata API. 2 article(s) and 0 redirect(s) counted. Data: Wikimedia Analytics API and Wikidata (CC0), fetched 2026-09-27. Full version: report.md. Wikidata: Q2756349.
